1 General overview of industry in Italy

The final energy consumption of the Italian industry is around 27 Mtoe (Eurostat, 2013), amounting to 10% of the EU-28, with the following breakdown into the main industrial sectors (accounting for 85% of total energy consumption of industry):

Table 1: Sectors final energy consumption in Italy.

| Sector group | Final energy consumption in 2013 [ktoe] | % share of total |
|----------------------------|---|------------------|
| Pulp, paper and print | 2,020 | 9% |
| Iron and steel | 5,207 | 23% |
| Non-metallic mineral | 4,994 | 22% |
| Chemical and petrochemical | 4,121 | 18% |
| Non-ferrous metal | 639 | 3% |
| Food and beverage | 2,657 | 12% |
| Machinery | 3,356 | 15% |
| Total | 22,994 | |

Regarding energy efficiency, the Italian Action Plan for Energy Efficiency, drafted in accordance with the Energy Efficiency Directive (EED), provides that industrial sector produces about one third of the 15.5 Mtoe of savings in end-use energy. In the period 2011-2015, the sector has achieved 31% of savings expected in 2020. The following data are referred to the year 2012, for which production data are available on the Eurostat database. For this reason, it was decided to use every data dating back to 2012.

2 Food and Beverage sector

Food and Beverage sector is represented in Italy by FEDERALIMENTARE and its 15 branches, that collect 6,850 companies belonging to every sector of F&B Industry:

- **AIDEPI** pasta, sweets, bakery and confectionary
- AIIPA frozen, baby foods, dietetic products, spices
- **ANCIT** canned fish
- ANICAV preserved vegetables
- ASSALZOO animal feed
- ASSICA cured and processed meat
- **ASSITOL** olive oil, seeds oil and margarine
- ASSOBIBE soft drinks
- ASSOBIRRA beer and malt
- ASSOCARNI fresh meat
- **ASSOLATTE** *milk and dairy products*
- FEDERVINI wine, vinegar. spirits
- ITALMOPA flours, based flour mixes
- MINERACQUA mineral natural water
- UNIONZUCCHERO sugar

The key economic parameters of the sector are (referred to 2015) reported in the table below.

Table 2: Key economic parameters for Italian Food and Beverage sector.

| Description | NACE (Group) | Number of enterprises [n] | No, of persons employed | Turnover [mil €] | Value added [mil €] | Production value [mil €] |
|---|-----------------|---------------------------|-------------------------|---------------------|------------------------|--------------------------|
| Manufacture of food products | C10 | 53,221 | 389,736 | 113,174 | 19,735 | 109,064 |
| Processing and preserving of meat and production of meat products | C10.1 | 3,458 | 57,500 | 22,713 | 2,850 | 23,395 |
| Processing and preserving of | C10.2 | 402 | 5,432 | 2,541 | 356 | 2,037 |

| | T | T | 1 | 1 | T | |
|--|--------|--------|---------|--------|-------|--------|
| fish. crustaceans and molluscs | | | | | | |
| Processing and preserving of fruit and vegetables | C10.3 | 1,753 | 28,831 | 10,552 | 1,689 | 10,381 |
| Manufacture of vegetable and animal oils and fats | C10.4 | 3,189 | 10,223 | 6,891 | 613 | 6,008 |
| Manufacture of dairy products | C10.5 | 3,446 | 43,542 | 18,673 | 2,749 | 18,220 |
| Manufacture of grain mill products. starches and starch products | C10.6 | 965 | 9,655 | 7,813 | 7,813 | 7,532 |
| Manufacture of bakery and farinaceous products | C10.7 | 34,427 | 169,083 | 18,458 | 5,348 | 18,044 |
| Manufacture of other food products | C10.8 | 5,062 | 58,134 | 20,426 | 4,677 | 18,875 |
| Manufacture of prepared animal feeds | C10.9 | 519 | 7,337 | 5,108 | 625 | 4,571 |
| Manufacture of beverages | C11 | 3,191 | 37,263 | 18,106 | 3,445 | 19,195 |
| Distilling. rectifying and blending of spirits | C11.01 | 518 | 4,804 | 2,531 | 621 | 2,664 |
| Manufacture of wine from grape | C11.02 | 2,007 | 19,969 | 8,748 | 1,513 | 8,910 |
| Manufacture of cider and other fruit wines | C11.03 | 0 | 0 | 0 | 0 | 0 |
| Manufacture of other non- | C11.04 | 53 | 156 | 35 | 7 | 35 |

D4.2 - Picture of efficiency projects implemented by the Industry sector-by-sector and process-by-process

| distilled fermented beverages | | | | | | |
|---|--------|-----|-------|-------|-----|-------|
| Manufacture of beer | C11.05 | 377 | 3,123 | 1,767 | 372 | 1,816 |
| Manufacture of malt | C11.06 | 0 | 0 | 0 | 0 | 0 |
| Manufacture of soft drinks; production of mineral waters and other bottled waters | C11.07 | 233 | 9,770 | 4,575 | 926 | 4,759 |

The agrifood system (primary production, processing and distribution) in the EU has a total turnover of 1,244 billion €. The food industry is characterized by 99.1% of small and medium-sized enterprises (SMEs), 90% of which are distributed mainly in Southern Europe. The food industry is one of the most important economic sectors in the EU manufacturing industry and the energy costs deriving from the activities of the numerous chains that characterize it are equally significant (Table below).

Table 3: Comparison between World-European-Italian Food and Beverage industry.

| Agrifood system | Energy consumption [%] | Final energy consumption | Source |
|-----------------|------------------------|-----------------------------|-----------------------|
| World | 32% | 95 EJ/year | FAO, issue paper 2011 |
| Europe-27 | 26% | 285 Mtoe | Elaboration of ENEA |
| Italy | 12.75% | 15.18 Mtoe** | ENEA-UTEE RAEE 2015 |

In Italy, the final energy consumption of the agri-food system totals 15.2 Mtoe (2014), of which 13.3 Mtoe from the agriculture and food industry, 0.2 Mtoe from the fisheries sector and 1.7 Mtoe by the forestry chain. The primary energy consumption of the sector was about half (4.7 Mtoe) than that of the food industry (8.6 Mtoe). Ultimately, the total energy consumption of the agri-food system represented 12.8% of final energy consumption at national level in 2014.

In terms of energy from secondary sources, the breakdown shows Low sulphur fuel oil and electricity among the highest demand carriers for the food industry, respectively 35.6% and 27.5%.

The Table below shows the strong disproportion between the energy contained in the products and the energy used in the processes of meat production, vegetable production, IV vegetable and frozen vegetables. The high ratio of cold chains and greenhouse production (20:1) is particularly significant, especially when compared to crop cultivation in the field with a ratio of 1.23 or cultivation of autumn cereals with a ratio of 2.53.

Table 4: Energy intensity of Food and Beverage industry in Italy.

| TYPE OF FOOD PRODUCT | Energy Intensity |
|---|------------------|
| | [kWhout/kWhin] |
| Fresh meat (stalls consuming, slaughter consumption) | 0.23 |
| Frozen meat (stall, slaughter, refrigeration) | 0.16 |
| Fresh greenhouse vegetables (plant protection products) | 0.04 |
| Vegetables IV range (production, processing) | 0.04 |
| Frozen vegetables (production, processing, refrigeration) | 0.03 |
| Fresh field crops (plant protection, soil treatment) | 1.23 |
| Autumn-winter cereals (plant protection, soil treatment) | 2.53 |

In 2014 the energy intensive sectors accounted about 2/3 of the total industry consumption in Italy (60%). Food industry registered a consumption share equal to 10.8% on the total.

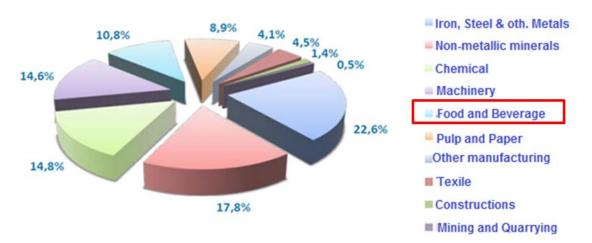

Figure 1: Energy consumption share of energy intensive sectors in Italy.

With respect to the energy produced from secondary sources, the table below shows Low Sulphur oil fuel and electric energy as the most demanded from the food industry with, respectively, 35.5% and 27.5% of total Italian consumption.

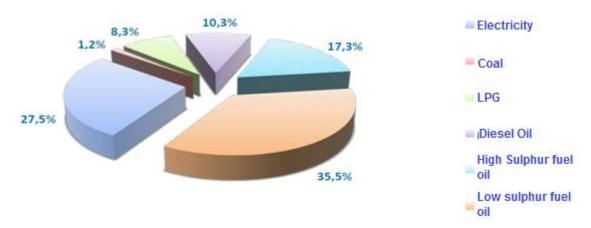

Figure 2: Fuel use in Food and Beverage industry in Italy.

3 Pulp, paper and print sector

Pulp, paper and print sectors covers NACE C17. It is divided into Manufacture of pulp, paper and paperboard (NACE C17.1) and Manufacture of articles of paper and paperboard (NACE C17.2), the first one being much more relevant in terms of energy consumption, even if the latter is more relevant in terms of number of enterprises and employees. Manufacture of Pulp, is not spread in Italy. However, there are important paper production areas (e.g. in Tuscany, in Lucca province), where many companies belonging to manufacture of articles of paper and paperboard are located. The key economic parameters of the sector are (referred to 2015) are showed in the table below.

Table 5: Key economic parameters for Italian Pulp and Paper sector.

| Description | NACE group | NACE division | No. of enterprises | No. of persons employed [n] | Turnover [mil €] | Value added [mil €] | Production value [mil €] |
|--|------------|------------------|--------------------|-----------------------------|---------------------|---------------------------|--------------------------------|
| Manufacture of paper and paper products | | C17 | 3,801 | 71,632 | 22,516 | 4,998 | 21,822 |
| Manufacture of pulp, paper and paperboard | | C17.1 | 211 | 10,834 | 5,269 | 980 | 4,723 |
| Manufacture of pulp | | C17.11 | 5 | 127 | 51 | 12 | 50 |
| Manufacture of paper and paperboard | | C17.12 | 206 | 10,707 | 4,971 | 968 | 4,631 |
| Manufacture of articles of paper and paperboard | | C17.2 | 3,590 | 60,798 | 17,246 | 4,018 | 17,098 |

The Italian pulp and paper industry uses recycled paper as raw material for about 49% of its production (data from Assocarta). The final energy consumption of the sector is reported in the table below.

Table 6: Paper industry energy consumption by energy carrier in Italy.

| Energy Source | 2013 | 2014 |
|---|------|------|
| Electricity consumption (TWh/y) | 7.11 | 7.01 |
| Electricity production (TWh/y) | 5.52 | 5.54 |
| Of which produced through hydro or solar PV (%) | 3.3% | 3.0% |

| Of which produced with CHP | 95.3% | 95.6% |
|--|--------|--------|
| Use of natural gas (TJ/y) | 87,300 | 86,700 |
| Energy production from biomass and wastes (TJ/y) | 500 | 500 |
| Use of process heat (TJ/y) | 44,300 | 43,400 |

4 Petroleum refineries sector

Two key groups are the most relevant in petroleum refineries sector: manufacture of coke oven products (NACE C19.1) and refined petroleum products (NACE C19.2). The main parameters for statistical analysis are reported in the below table.

Table 7: Key economic parameters for Italian Petroleum refineries sector.

| Description | NACE group | No. of enterprises | No. of persons employed [n] | Turnover [mil €] | Value added [mil €] | Production value [mil €] |
|--|------------|--------------------|-----------------------------|---------------------|---------------------------|--------------------------------|
| Manufacture of coke and refined petroleum products | C19 | 320 | 15,852 | 71,424.9 | 1961.7 | 53,307.0 |
| Manufacture of coke oven products | C19.1 | 4 | 272 | 183.6 | 35.3 | 196.4 |
| Manufacture of refined petroleum products | C19.2 | 316 | 15,580 | 71,241.3 | 1926.4 | 53,110.6 |

The sector generates over 50 billion € of revenues in Italy. Refined petroleum products are the largest subsector, accounting almost the whole production value. The money spent in research and development has not affected the gross domestic product significantly, as you can see from the tables below.

Table 8: Petroleum refineries in Italy - distribution of enterprises.

| Sector | SMEs [n] | Large enterprises |
|--|-------------|----------------------|
| | | [n] |
| Manufacture of coke and refined petroleum products | 305 | 15 |

Table 9: Petroleum refineries in Italy - research and development.

| Sector | Expenditure in R&D [mil €] | % of Italian GDP |
|--|----------------------------|------------------|
| Manufacture of coke and refined petroleum products | 17,368 | 0.001% |

Exports represents near 40% of the production value, while imports are half of exports.

Table 10: Petroleum refineries in Italy - imports/exports.

| Sector | Production value | Import value | Export value |
|--|------------------|--------------|--------------|
| | [mil €] | [mil €] | [mil €] |
| Manufacture of coke and refined petroleum products | 78,962 | 10,577 | 20,513 |

5 Chemical sector

Nowadays, the chemical industry sector in Italy represents about 6% of the turnover produced by the manufacturing industry. The main parameters for statistical analysis are reported in the below table.

Table 11: Key economic parameters for Italian Chemical sector

| Description | NACE group | No. of enterprises | No. of persons employed | Turnover [mil €] | Value added [mil €] | Production value |
|--|------------|--------------------|-------------------------|---------------------|------------------------|------------------|
| | | [n] | [n] | | | [mil €] |
| Manufacture of chemicals and chemical products | C20 | 4,436 | 111,264 | 53,388.1 | 9,144.7 | 51,043.4 |
| Manufacture of basic chemicals. fertilisers and nitrogen compounds. plastics and synthetic rubber in primary forms | C20.1 | 1,076 | 39,357 | 24,692.2 | 3,238.6 | 23,911.7 |
| Manufacture of pesticides and other agrochemical products | C20.2 | 45 | 1,823 | 946.4 | 185.5 | 955.9 |
| Manufacture of paints. varnishes and similar coatings. printing ink and mastics | C20.3 | 870 | 20,039 | 5,919.2 | 1,382.6 | 5,675.3 |
| Manufacture of soap and detergents. cleaning and polishing preparations. perfumes and toilet preparations | C20.4 | 1,370 | 26,249 | 9,075.3 | 2,213.2 | 8,993.6 |
| Manufacture of other chemical products | C20.5 | 1,033 | 20,796 | 11,400.2 | 1,961.7 | 10,147.7 |

| Manufacture of man-made fibres | C20.6 | 42 | 3,000 | 1,354.5 | 163.1 | 1,359.1 |
|--|-------|-----|--------|----------|---------|----------|
| Manufacture of basic pharmaceutical products and pharmaceutical preparations | C21 | 464 | 61,601 | 26,205 | 7,725.1 | 23,878.5 |
| Manufacture of basic pharmaceutical products | C21.1 | 103 | 12,456 | 4,586.5 | 1,516.7 | 4,509.2 |
| Manufacture of pharmaceutical preparations | C21.2 | 361 | 49,145 | 21,618.7 | 6,208.5 | 19,469.3 |

In pharmaceutical sector, 15% of the total enterprises are large enterprises, the highest percentage if compared to chemical sector and other sectors in general.

Table 12: Chemical industry in Italy - distribution of enterprises.

| Sector | SMEs [n] | Large enterprises |
|--|-------------|----------------------|
| | | [n] |
| Manufacture of chemicals and chemical products | 4,375 | 61 |
| Manufacture of basic pharmaceutical products and pharmaceutical preparations | 402 | 62 |

Technological innovation is a feature of this sector, although in recent years it has invested less in R&D: the following table shows that in 2012 expenditure in research and development was less than 1% of the turnover.

Table 13: Chemical industry in Italy - research and development.

| Sector | Expenditure in R&D [mil €] | % of Italian GDP |
|--|----------------------------------|------------------|
| Manufacture of chemicals and chemical products | 385.6 | 0.02% |

In manufacturing of chemical products, the exports represent about half of the production value, while the import is relevant, too. The energy consumption of the chemical sector is very high; it concurs for near 30% to the entire manufacture sector's consumption.

Table 14: Chemical industry in Italy - research and development.

| Sector | Production value [mil €] | Import value [mil €] | Export value [mil €] |
|--|--------------------------|-------------------------|-------------------------|
| Manufacture of chemicals and chemical products | 51,043 | 35,627 | 25,331 |

Chemical industry is very complex as it includes a lot of branches with different features: the following Figure, based on *Federchimica* data shows the distribution of chemicals production in Italy.

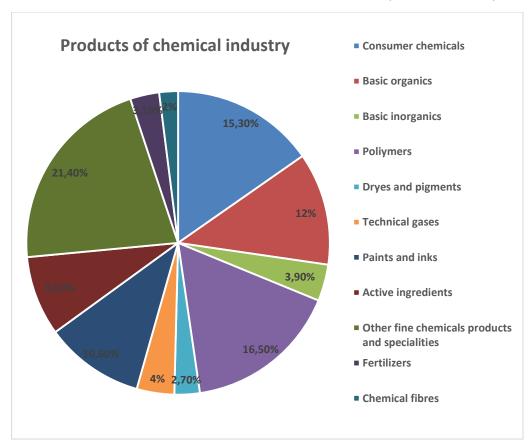

Figure 3: Products of chemical industry.

6 Non-metallic minerals sector

Non-metallic mineral products comprise of the production of cement, ceramics, glass and lime. Non-metallic mineral (C23) sector is composed by the following subsectors:

- Manufacture of glass and glass products (C23.1);
- Manufacture of ceramics and ceramic products (C23.2, C23.3, C23.4, C23.7, C23.9);
- Manufacture of cement (C23.5 and C23.6);
- Manufacture of lime (C23.5 and C23.6).

The general statistic parameters for sector analysis are shown in the table below.

Table 15: Key economic parameters for Italian Non-metallic minerals sector.

| Description | NACE group | No. of enterprises | No. of persons employed [n] | Turnover [mil €] | Value added [mil €] | Production value [mil €] |
|---|------------|--------------------|-----------------------------|---------------------|---------------------------|--------------------------|
| Manufacture of other non-metallic products | C23 | 21,420 | 191,799 | 31,219.1 | 8,832.2 | 31,303.0 |
| Manufacture of glass and glass products | C23.1 | 3,999 | 38,294 | 6,026.9 | 2,009.5 | 6,227.7 |
| Manufacture of refractory products | C23.2 | 124 | 2,649 | 665.8 | 173.2 | 608.5 |
| Manufacture of clay building materials | C23.3 | 762 | 29,932 | 5,488.1 | 1,690.7 | 5,436.8 |
| Manufacture of other porcelain and ceramic products | C23.4 | 2,528 | 13,471 | 1,072.0 | 389.4 | 1,053.4 |
| Manufacture of cement. lime and plaster | C23.5 | 191 | 9,485 | 2,487.7 | 743.4 | 2,775.0 |
| Manufacture of articles of concrete. cement and plaster | C23.6 | 3,412 | 41,911 | 7,751.9 | 1,473.3 | 1,688.4 |
| Cutting. shaping and finishing of stone | C23.7 | 9,360 | 43,935 | 4,920.9 | 1,484.5 | 4,844.7 |
| Manufacture of abrasive products and non-metallic mineral products n.e.c. | C23.9 | 1,044 | 12,122 | 2,805.8 | 653.2 | 2,660.4 |

Considering the turnover, glass and cement industry are the most relevant subsectors, although stone industry (23.7) has the highest number of enterprises and persons employed. Almost the whole enterprises of the sector are SMEs.

Table 16: Non-metallic mineral in Italy - distribution of enterprises.

| Sector | SMEs [n] | Large enterprises |
|--|-------------|----------------------|
| | | [n] |
| Manufacture of other non-metallic products | 21,346 | 74 |

Table 17: Non-metallic mineral in Italy - research and development.

| Sector | Expenditure in R&D [mil €] | % of Italian GDP |
|-----------------------------------|----------------------------|------------------|
| Manufacture of other non-metallic | 108.7 | 0.01% |
| products | | |

The exports represent nearly 30% of the production value of the entire sector, while the imports have a lower weight.

Table 18: Non-metallic mineral in Italy - imports/exports.

| Sector | Production value [mil €] | Import value [mil €] | Export value [mil €] |
|--|--------------------------------|-------------------------|-------------------------|
| Manufacture of other non-metallic products | 31,303 | 3,244 | 8,924 |

6.1 Glass sector in Italy

The glass industry consists of several branches, which differ on the type of finished product and on the production process.

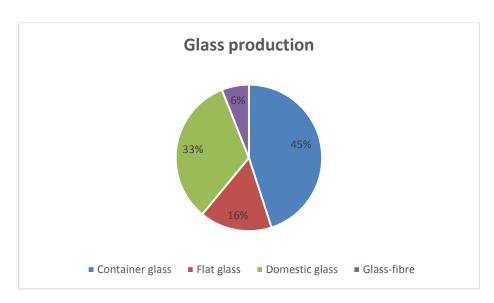

Figure 4: Products of glass industry in Italy.

Container glass is used properly in food and beverage sector, whereas flat glass is used for automotive and building. Imports and exports are quite relevant for all product types, compared to the national production (see table below).

Table 19: Imports/exports of glass industry (Source: Assovetro).

| | Container glass | Flat glass | Domestic glass | Glass-fibre | Total |
|-------------------|-----------------|------------|----------------|-------------|-----------|
| | | | | | |
| Production (ton.) | 3,936,885 | 838,019 | 148,422 | 86,829 | 5,010,155 |
| Import (ton.) | 742,599 | 278,494 | 86,731 | 164,070 | 1,107,824 |
| Export (ton.) | 556,899 | 148,342 | 101,023 | 79,847 | 806,264 |

In 2015, the total production of container glass was 3,936,885 tonnes (source: Assovetro, Italian association of glass producers), 86% of which was bottles: other articles of this sub sector were containers for pharmaceutical industries and food jars.

6.2 Cement sector in Italy

The Cement industry consumes 85% of the total final energy of non-metallic mineral sector. This subsector is energy intensive and typically the costs related to energy uses are about 40% of total cost production. AITEC is the Italian association of cement producers. They have published the activities of cement industries in the last years, which is shown in the following table.

Table 20: Imports/exports of cement industry in Italy.

| | 2012 | 2013 | 2014 |
|-------------------|------------|------------|------------|
| Production (ton.) | 26,244,000 | 23,083,000 | 21,542,000 |

| Import (ton.) | 1,834,000 | 1,364,000 | 1,195,000 |
|---------------|-----------|-----------|-----------|
| Export (ton.) | 1,757,000 | 2,443,000 | 2,502,000 |

Imports and exports are scarcely relevant if compared to production values. This is in line with the expectations from cement industry. As reported in par. **Errore. L'origine riferimento non è stata trovata.**, it is not economically convenient to transport cement on long distances, so the production is usually focused in the radius of 200-300 km from the large construction sites.

6.3 Ceramic sector in Italy

The ceramic industries in Italy can be divided into some sub sectors, which are tiles, sanitary, flat and refractory: in particular ceramic tiles are one of the most developed product. Exports have a key role in ceramic sector; indeed, 84% of the overall turnover is attributed to overseas sales. Domestic market remains stable over the years. The following table, based on data of *Confidustria Ceramica*, the Italian association of ceramic industries, shows the results for the ceramic tiles market in the last years: a large percentage of the tiles produced is exported to foreign markets.

Table 21: Imports/exports of ceramic tiles industry.

| | 2013 | 2014 | 2015 |
|--|-------|-------|-------|
| Production (10 ⁶ m ²) | 399 | 375 | 395 |
| Import (10 ⁶ m ²) | 17.7 | 14.0 | 17.0 |
| Export (10 ⁶ m ²) | 301.8 | 305.6 | 317.0 |

7 Iron&Steel sector

The sector is made up of four main groups, with production of basic Iron&Steel and of ferro-alloys (generally indicated as "non-alloy") being the most significant sector in terms of revenues, value added and production value. This industrial sector is considered energy intensive. The key economic indicators for the iron and steel sector to be used for sector analysis in Italy are shown in the table below.

Table 22: Key economic parameters for Italian Iron and Steel sector.

| Description | NACE group | No. of enterprises | No. of persons employed [n] | Turnover [mil €] | Value added [mil €] | Production value [mil €] |
|---|------------|--------------------|-----------------------------|---------------------|---------------------------|--------------------------|
| Manufacture of basic metals | C24 | 3,811 | 124,667 | 57,395.8 | 7,441.1 | 57,256.1 |
| Manufacture of basic iron and steel and of ferro-alloys | C24.1 | 460 | 41,441 | 22,248.6 | 2,255.2 | 22,336.3 |
| Manufacture of tubes, pipes, hollow profiles and related fittings, of steel | C24.2 | 360 | 17,256 | 9,088.2 | 1,513.6 | 8,986.2 |
| Manufacture of other products of first processing of steel | C24.3 | 1,107 | 17,419 | 6,351.2 | 1,010.3 | 6,271.5 |

In 2012 the sector counted 3,800 enterprises, 2% of which are large enterprises.

Table 23: Iron & steel in Italy - distribution of enterprises.

| Sector | SMEs [n] | Large enterprises |
|-----------------------------|-------------|----------------------|
| | | [n] |
| Manufacture of basic metals | 3,743 | 68 |

Table 24: Iron & steel in Italy - research and development.

| Sector | Expenditure in R&D [mil €] | % of Italian GDP |
|--|----------------------------|------------------|
| Manufacture of basic iron and steel and of | 53.34 | 0.01% |

| ferro-alloys | | |
|-------------------------|-------|-------|
| Manufacture of basic | 27.70 | 0.01% |
| precious and other non- | | |
| ferrous metals | | |

Both imports and exports are particularly relevant for the manufacture of basic metals, equalling to more than half of the entire production value, which is an index of a prosperous market.

Table 25: Iron & steel in Italy - imports/exports.

| Sector | Production value [mil €] | Import value [mil €] | Export value [mil €] |
|--|--------------------------------|-------------------------|-------------------------|
| Manufacture of | 57,256 | 30,898 | 32,874 |
| basic iron and steel and of ferro-alloys | | | |

The production of total crude steel has maintained almost constant during the last years, meanwhile stainless crude's production has had a considerable decrease between the years 2012 and 2014.

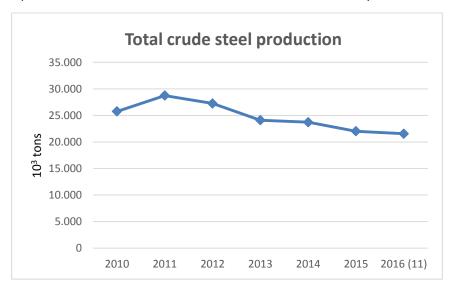

Figure 5: Total crude steel production in Italy.

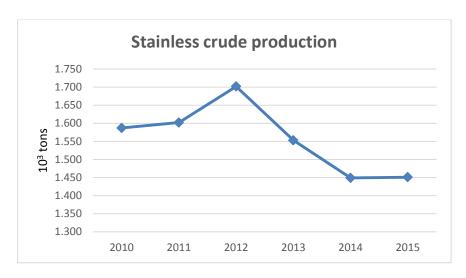

Figure 6: Stainless crude production in Italy.

Since 2012, imports of steel (both all qualities and stainless) have increased, especially from China and Asian market; exports have remained almost constant, except for a decrease of stainless in the years 2012-2013.

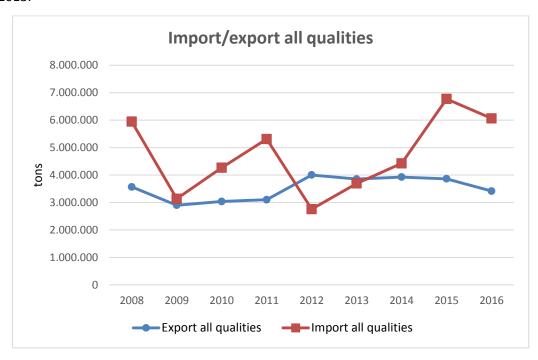

Figure 7: All qualities steel imports/exports in Italy.

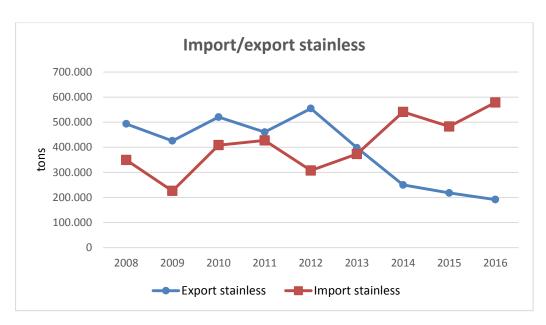

Figure 8: Stainless steel imports/exports in Italy.

8 Other metals sector

The category of non-ferrous metals includes all metals that do not contain ferrous materials, such as cast iron, iron, etc. The main metals that fall into these classifications are: aluminium, nickel, lead, copper, tin, zinc. In some classifications, this category is treated together with the metallurgy in general, but in the following discussion is divided to be able to adapt to the classification of Eurostat.

Table 26: Key economic parameters for Italian Other metals sector.

| Description | NACE group | No. of enterprises | No. of persons employed [n] | Turnover [mil €] | Value added [mil €] | Production value [mil €] |
|--|------------|--------------------|-----------------------------|---------------------|---------------------------|--------------------------|
| Manufacture of basic precious and other non-ferrous metals | C24.4 | 741 | 18,921 | 13,286.2 | 1,181.4 | 13,232.6 |
| Casting of metals | C24.5 | 1,143 | 29,630 | 6,421.6 | 1,481.0 | 6,429.5 |

9 Machinery sector

The machinery sector is split among 4 NACE divisions:

- C25 (Manufacture of fabricated metal products, except machinery and equipment);
- C26 (Manufacture of computer, electronic and optical products);
- C27 (Manufacture of electrical equipment);
- C28 (Manufacture of machinery and equipment not elsewhere classified).

The machinery sector in Italy has over 107,000 enterprises and 1,260,000 people employed, while it contributed to a turnover of over 246,800 in revenue in 2012. The largest division of this sector is the manufacture of machinery and equipment (C28) with 45% of the sector's turnover and 45% of the sector's production value. Most of the companies are SMEs, over 99% of all that enterprises countless of 250 employees:

Table 27: Machinery sector in Italy - distribution of enterprises.

| Sector | SMEs [n] | Large enterprises [n] |
|--|-------------|-----------------------|
| Manufacture of fabricated metal products, except machinery and equipment | 69,436 | 92 |
| Manufacture of machinery and equipment n.e.c. | 23,489 | 196 |
| Manufacture of electrical equipment | 8,895 | 76 |
| Manufacture of computer, electronic and optical products | 5,469 | 51 |

This industrial sector has a turnover of 246,800 million €.

Table 28: Machinery sector in Italy - research and development.

| Sector | Expenditure in R&D [mil €] | % of Italian GDP |
|--|----------------------------|------------------|
| Manufacture of fabricated metal products, except machinery and equipment | 278.8 | 0.02 |

| Manufacture of computer, electronic and optical products | 1,295.70 | 0.08 |
|--|----------|------|
| Manufacture of electrical equipment | 483 | 0.03 |
| Manufacture of machinery and equipment n.e.c. | 1,371.70 | 0.09 |

Unfortunately, there are not disaggregate data for each sub-sector, so the table reports the sum for every macro-sector even if there is some missing data. Moreover, it was not so easy define the quantities of production, import and export because of the different units of measurement adopted (e.g. p/st or kg)..

Table 29: Machinery sector in Italy - imports/exports.

| Sector | Production value | Import value | Export value |
|----------------------|------------------|--------------|--------------|
| | [mil €] | [mil €] | [mil €] |
| | | | |

10 Energy Statistics

10.1 Energy consumption

The total gross inland consumption split by fuel for Italy in 2015 is reported in the below table.

Table 31: Italian gross inland energy consumption by energy carrier [ktoe].

| Total all products | 156,169 |
|--------------------------|---------|
| Solid fuels | 12,301 |
| Coking coal | 1,662 |
| Other bituminous coal | 10,142 |
| Sub-bituminous coal | 200 |
| Lignite / Brown Coal | 1 |
| Coke oven coke | 296 |
| Oil (total) | 57,160 |
| Crude oil | 67,432 |
| Refinery Feedstocks | 5,704 |
| Additives / Oxygenates | 439 |
| LPG | 2,253 |
| Motor Gasoline (w/o bio) | -8,349 |
| Kerosene Type Jet Fuel | 1,819 |
| Other Kerosene | 49 |
| Naphtha | 276 |
| Gas/Diesel Oil (w/o bio) | -6,261 |
| Fuel Oil | -4,868 |
| Lubricants | -757 |
| Bitumen | -1,380 |
| Petroleum Coke | 929 |
| Paraffin Waxes | -22 |

| Other Products | -107 |
|----------------------------|--------|
| Gas | 55,301 |
| Natural gas | 55,301 |
| Total Renewables | 26,269 |
| Hydro power | 3,916 |
| Wind power | 1,276 |
| Solar thermal | 190 |
| Solar PV | 1,973 |
| Solid biomass | 8,578 |
| Charcoal | 42 |
| Biogas (all) | 1,871 |
| Municipal wastes (renew.) | 846 |
| Bio gasoline | 25 |
| Biodiesel | 1,144 |
| Other liquid biofuels | 938 |
| Geo-thermal | 5,469 |
| Wastes (non ren.) | 1,149 |
| Industrial wastes | 303 |
| Municial wastes (non-ren.) | 846 |
| Electricity | 3,988 |

The oil and natural gas consumption are almost equal, and each of them is around the double of Renewable Energy Sources. Solid fuels consumption is significant but is less than half of Renewable Energy Sources.

The total Final Energy consumption, including industry, transport and other sectors in 2015 was 116,444 ktoe (two thirds of the gross inland consumption). The split among the different sectors is shown in the table below:

Table 32: Final Energy consumption by sector in Italy.

| Sector | Final Energy Consumption [ktoe] | Share % |
|-----------|---------------------------------|---------|
| Industry | 26,023 | 22.3% |
| Transport | 39,541 | 34.0% |

| Services | 15,391 | 13.2% |
|------------------------|--------|-------|
| Residential | 32,494 | 27.9% |
| Agriculture / Forestry | 2,663 | 2.3% |
| Fishing | 188 | 0.2% |
| Non-specified (Other) | 143 | 0.1% |

Considering only industry, the split by different fuels is reported in the diagram below.

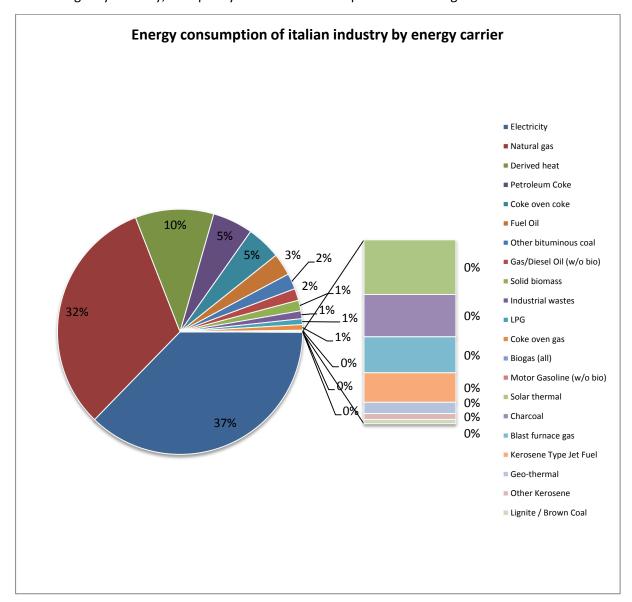

Figure 9: Final Energy consumption of Italian industry by energy carrier.

The most relevant energy carriers are Electricity and Natural gas with the highest energy saving potentials. Derived heat plays also an important role, with 10% share and overall 2,696 ktoe of consumption. The carriers from biogas to lignite/brown coal have a cumulative weight of 0.26%, so not influencing much the sector's consumption. The energy carriers' consumption by each manufacturing sector for 2015 is reported in the table below.

Table 33 Final Energy consumption per sectors per energy carrier in Italy [ktoe].

| | Iron & steel | Chemical and Petroch. | Non- ferrous metal | Non- metallic Minerals (Glass, pottery & building mat.) | Transport Eq. | Machin. | Mining and Quarrying | Food and Tabacco | Paper, Pulp and Print | Wood and Wood Products | Constr. | Textile and Leather | Non- specified |
|--------------------------------|-----------------|-----------------------------|--------------------------|---|------------------|---------|----------------------------|---------------------|-----------------------------|------------------------------|---------|---------------------------|-------------------|
| Total | 4,716 | 3,292 | 625 | 4,971 | 398 | 3,357 | 111 | 2,708 | 2,372 | 453 | 350 | 1,106 | 1,564 |
| Solid fuels | 1,579 | 1 | 3 | 138 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 1 |
| Other bituminous coal | 407 | 0 | 0 | 136 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| Lignite / Brown Coal | 0 | 0 | 0 | 1 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| Coke oven coke | 1,172 | 1 | 3 | 1 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 1 |

| Biogas (all) | 0 | 7 | 0 | 0 | 0 | 0 | 0 | 13 | 0 | 0 | 0 | 0 | 0 |
| Geo- thermal | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 2 |
| Wastes (non ren.) | 0 | 71 | 0 | 168 | 0 | 3 | 0 | 0 | 0 | 0 | 0 | 0 | 27 |
| Industrial wastes | 0 | 71 | 0 | 168 | 0 | 3 | 0 | 0 | 0 | 0 | 0 | 0 | 27 |
| Derived heat | 160 | 811 | 0 | 166 | 96 | 25 | 1 | 320 | 940 | 31 | 0 | 35 | 110 |
| Electricity | 1,499 | 1,200 | 214 | 773 | 302 | 1,715 | 54 | 1,045 | 751 | 259 | 117 | 450 | 1,309 |

Iron and steel industry is by far the largest consumer of solid fuels, especially Coke oven and Bituminous coals, and one of the most relevant in terms of Natural gas consumption. Other energy carriers used in Iron and Steel sector (however in much lower quantities) are Coke oven gas, Derived heat and Fuel oil. Furthermore, electricity consumption is quite high, around 15% of the electricity consumption of whole industry. This originates from the structure of the industry, characterized by large furnaces either run with solid fuels and natural gas (Blast furnaces, Basic Oxygen Furnaces and, with lower consumption, annealing furnaces) or by electricity (Electric Arc Furnaces).

For chemical sector, the most relevant consumption is in Electricity, and in terms of fuels also Oil and Gas play an important role. Derived heat is also consumed in high quantities in this sector. Considering the variety of the products/processes, it is difficult to allocate these consumptions to specific technologies. Chemicals show also a relevant consumption of wastes, probably coming from the plants themselves and re-used as fuels and biogas.

For non-ferrous metals, whose process is similar to the one of Iron&steel but without the step in which coke is reduced to pass Carbon to Iron, the structure is also similar to the one of Iron&Steel, but without coke, showing a large consumption of electricity and natural gas and a smaller consumption of oil.

Non-metallic minerals are unique: they are almost the only consumers of Petroleum coke, mainly centered on cement manufacturing plants. In cement industry, Petroleum Coke, Coal and Fuel oil, plus a small amount of Natural gas, are burnt in large quantities in kilns, to transform the mixture of raw materials into clinker. In cement production, also the use of wastes is relevant, where End-of-life tyres play the most important role as replacements for fossil fuels in the kiln, while some renewable wastes (e.g. dried muds from sewage plants and solid biomass) are used for raw materials preparation and fuels preparation in the drying phases. For glass and ceramics, the use of fossil fuels is also very high, especially in the furnaces that are the core of the processes. Also, electricity consumption, partially in furnaces and partially in the forming sections, plays a relevant role. Considering the high temperatures of the furnaces and the constant need of heat in the plants, it is not surprising that also some derived heat is used in these sectors.

Machinery, like the chemical sector, comprises a large variety of different products/processes. The most relevant energy carrier are Electricity and Natural gas, followed by oil, but it is difficult to allocate the consumptions to specific processes.

Also, food and tobacco are characterized by several different products and processes, and their main consumptions are in terms of natural gas and electricity. A characteristic of this sector is the use of biomass and biogas, mostly coming as a waste from the production processes. Also derived heat plays an important role.

Also for pulp and paper sector derived heat is important, together with natural gas and electricity. The process for pulp and paper manufacturing foresees a high use of heat especially in the drying section, while electricity is mostly used in the other parts of the papermaking machines.

10.2 Energy costs

A comparison between Italy, European Union and Euro countries is shown in the table below.

Table 34: Electricity prices for industrial customers in Italy.

| Consumption [MWh] | Type of cost | Italy¹ [c€/kWh] | European Union [c€/kWh] | Euro area [c€/kWh] |
|-------------------|--------------|---------------------------|-------------------------------|-----------------------|
| < 20 | Before taxes | 16.66 | 14.8 | 14.84 |
| < 20 | After taxes | 32.24 | 23.44 | 25.09 |
| 20 500 | Before taxes | 11.11 | 10.97 | 10.71 |
| 20-500 | After taxes | 22.47 | 17.91 | 18.87 |
| F00 2 000 | Before taxes | 9.31 | 8.85 | 8.53 |
| 500-2.000 | After taxes | 18.64 | 14.86 | 15.57 |
| 2 000 20 000 | Before taxes | 8.58 | 7.89 | 7.49 |
| 2.000-20.000 | After taxes | 16.62 | 13.23 | 13.71 |
| 20.000- | Before taxes | 7.66 | 7.08 | 6.59 |
| 70.000 | After taxes | 13.84 | 11.58 | 11.71 |
| 70.000- | Before taxes | 6.7 | 6.55 | 6 |
| 150.000 | After taxes | 11.38 | 10.42 | 10.31 |

For electricity, the average cost in Italy is usually higher than in the rest of the EU. Before taxes, the difference is between 1% and 16%, while after taxes it is much higher, from 10% to 37%. This difference is usually (but not in all cases) higher when the comparison is between Italy and the rest of Euro area.

| Consumption [1000 m ³] | Type of cost | Italy [c€/m³] | European Union [c€/m³] | Euro area [c€/m³] |
|------------------------------------|--------------|-------------------------|------------------------------|----------------------|
| < 26 | Before taxes | 51.79 | 49.09 | 49.57 |
| < 20 | After taxes | 76.08 | 65.73 | 66.54 |
| 26-263 | Before taxes | 42.37 | 40.56 | 41.53 |
| 20-203 | After taxes | 59.05 | 54.82 | 56.06 |
| 263-2,627 | Before taxes | 33.25 | 34.15 | 34.51 |
| | After taxes | 39.73 | 45.32 | 45.34 |
| 2 627 26 260 | Before taxes | 29.41 | 28.86 | 29.07 |
| 2,627-26,268 | After taxes | 32.43 | 37.59 | 37.31 |
| 26,268- | Before taxes | 28.02 | 26.1 | 26.44 |
| 105,072 | After taxes | 30.46 | 33.82 | 33.69 |

D4.2 - Picture of efficiency projects implemented by the Industry sector-by-sector and process-by-process

¹ The costs of natural gas and electricity for industry in Italy are available from the Italian Authority for Electricity, Gas and Water.

For natural gas, the average costs have a different trend when Italy and the rest of Europe are compared. A summary of the average prices for 2015 is reported in the tables below.

Table 35: Price of unleaded gasoline in Italy.

| Month | Price before taxes [€/1000] | VAT [€/1000 I] | Levies [€/1000 I] | Price after taxes [€/1000] |
|-----------|-------------------------------|----------------|-------------------|------------------------------|
| January | 478.19 | 265.45 | 728.4 | 1,472.04 |
| February | 492.46 | 268.59 | 728.4 | 1,489.44 |
| March | 555.13 | 282.38 | 728.4 | 1,565.90 |
| April | 567.2 | 285.03 | 728.4 | 1,580.63 |

| December | 241.74 | N/A | 31.39 | 273.13 |
|----------|---------|-----|-------|--------|
| Average | 324.023 | N/A | 31.39 | 355.41 |

For other energy carriers, there was no standard price or average price available for the whole MS.

10.3 Energy Statistics – CO₂ emission factors from different energy carriers

For CO₂ emission factors, the Italian Research Centre for Energy and Environment (ENEA) proposes the following conversion:

| Energy carrier | LCV | CO ₂ emission factor [kg/kWh] |
|--|---------------------------|--|
| Natura gas | 9.45 kWh/Sm ³ | 0.21 |
| LPG (70% Ethane + 30% Butane) | 26.78 kWh/Sm ³ | 0.24 |
| Diesel oil | 11.86 kWh/kg | 0.28 |
| Fuel oil | 11.47 kWh/kg | 0.29 |
| Coal | 7.92 kWh/kg | 0.37 |
| Electricity from the national grid | - | 0.46 |
| District heating | - | 0.30 |
| Municipal waste (50% renewable, 50% non-renewable) | 4.00 kWh/kg | 0.17 |
